Applicant's election without traverse of the bat in Paper No. 5 is acknowledged.

Claims 9-16 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected method of making a bat, there being no allowable generic or linking claim. Election was made **without** traverse in Paper No. 5.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 4, and 6 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Uke.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3, 5, 7 and 8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Uke.

Concerning claim 3, Uke discloses that the stiffness of the layers may be varied as desired. It would have been obvious to one of ordinary skill in the art to have varied the stiffness within the range claimed by applicant if such a stiffness was desired by a particular batter.

Regarding claims 5 and 8, Uke discloses that the bat layers may be constructed in various fashions as desired. Both tubular socks and sheet materials are commonly known methods of applying fiber reinforced composite layers and would obviously have been suitable for the

ordinarily skilled artisan looking to construct Uke's bat depending on what material was more readily available or cheaper.

With regard to claim 7, E-glass is commonly known and would have been suitable for use as Uke's fiberglass.

Eggiman, Yeh, Seki et al., Baum, Souders et al., Philpot et al., Misono et al. And Feeney et al. have been cited for interest because they disclose similar bats.
